# TanStack

High-quality open-source software for web developers.

Headless, type-safe, & powerful utilities for State Management, Routing, Data Visualization, Charts, Tables, and more.

## Open Source Libraries

### TanStack Query

Powerful asynchronous state management, server-state utilities and data fetching

Fetch, cache, update, and wrangle all forms of async data in your TSJS, React, Vue, Solid, Svelte & Angular applications all without touching any "global state".

### TanStack Table

Headless UI for building powerful tables & datagrids

Supercharge your tables or build a datagrid from scratch for TSJS, React, Vue, Solid & Svelte while retaining 100% control over markup and styles.

### TanStack Router

Type-safe Routing for React applications.

Powerful routing for your React applications including a fully type-safe API and first-class search-param for managing state in the URL.

### TanStack Virtual

Headless UI for Virtualizing Large Element Lists

Virtualize only the visible content for massive scrollable DOM nodes at 60FPS in TSJS, React, Vue, Solid & Svelte while retaining 100% control over markup and styles.

### TanStack Form

Headless UI for building performant and type-safe forms

Headless, performant, and type-safe form state management for TSJS, React, Solid, Vue, and Lit

### React Charts

Simple, immersive & interactive charts for React

Flexible, declarative, and highly configurable charts designed to pragmatically display dynamic data.

### TanStack Ranger

Headless range and multi-range slider utilities.

TanStack ranger supplies the primitive range and multi-range slider logic as a headless API that can be attached to any styles or markup for that perfect design.

### TanStack Store

Framework agnostic data store with reactive framework adapters

The core data store that powers TanStack libraries and their framework adapters. Use it if you dare.

### TanStack Config

Configuration and tools for publishing and maintaining high-quality JavaScript packages

The build and publish utilities used by our other projects. Use it if you dare.

# Benefits of being Universal

- Larger user base
- More contributors working together
- Less fragmentation and maintenance cost
- Better abstraction and architecture
- Benefit the whole ecosystem

BUT!

Specific is Not a Bad Thing

# Deployment

# Bundle Tools

unplugin

...

# The "Set Union"

- Extract the universal parts
- Expand the scopes
- Grow the communities

- 2019 Chakra UI React
- 2019 Chakra UI Vue
- 2021 Zag     ...
- 2022 Panda CSS      ...
- 2022 Ark UI   
- 2024 Chakra v3 migrate to Ark in progress

# The "Set Theory"

Expand the "Set Intersection" 

- Try making the projects universal
- Break circles, expand the intersection
- Enlarge the scope

Seek for "Set Union" 

- Find the parts that can be universal, and extract them
- Keep specific integrations for better experience
- Expand the communities

# Thank You!
